ReSound

rediscover hearing

ReSound Unite™

ReSound wireless accessories are modern and easy-to-use. Together with ReSound wireless hearing instruments, they complete your patients' hearing system, providing clear and comfortable access to sound in difficult listening situations.

Based on ReSound's groundbreaking application of 2.4 GHz wireless technology, the wireless accessories allow for a stronger, clearer and more stable signal transmitted directly to the hearing instruments. Insignificant delay removes echo and lip-sync issues even over long distances. Each accessory is purpose built, keeping in mind specific user situations.

Simplicity and usability are key for both you and your patients. To pair to a hearing instrument, just press the pairing button on the accessory, open and close the battery door of the hearing instruments, and the accessory is automatically paired and ready to operate. Once set up, they run on a plug-and-play principle.

There are currently four wireless accessories and one app that will improve the quality of life of your patients.

Wireless accessories:

- **ReSound Unite™ Mini Microphone:** A portable voice and sound streamer for people on the go. Streams the voice of the conversation partner at least 23 feet - or audio device - directly to the hearing instruments.
- **ReSound Unite™ Phone Clip+:** Streams sound from the mobile phone directly to both hearing instruments. When not streaming a phone conversation, the Phone Clip+ can be used as a basic remote control for hearing instruments.
- **ReSound Unite™ TV Streamer 2:** Streams crystal clear stereo sound directly to the hearing instruments up to 23 feet from audio devices such as the TV, computers or stereo.
- **ReSound Unite™ Remote Control 2:** Offers a large display screen, making it easy to change programs, adjust volume and switch to ReSound Unite™ TV Streamer 2 or Mini Microphone wireless streaming mode.

Smart phone app:

- **ReSound Control™:** Android™ or iPhone app offering personalized and advanced control of hearing instruments and wireless accessories. Phone Clip+ is required to operate the Control app. Available on the App Store and Google Play™.

The ReSound Unite® accessories can be used with ReSound Verso™ and ReSound Alera® wireless instruments.

Makes connecting simple

ReSound Unite™ Mini Microphone:

- A small, lightweight and portable wireless clip-on microphone that transmits speech directly to your patients' hearing instruments within a range of 23 feet.
- The patient can listen to one person speaking from beside or behind them, for example in the car, during a dinner party, when walking or moving around at home.
- The patient can listen to one person speaking in an environment where many people are speaking at once or where the acoustics are poor.
- Doubles as a portable streaming device using plug-and-play line-in functionality, for listening to devices like an iPod, PC or when using Skype.
- Reconnects automatically if hearing instrument user and Mini Microphone user move out of range and return within range within 5 minutes.
- Offers volume adjustment on both speech and line-in signals.

ReSound Unite™ Phone Clip+:

- Small, lightweight device that clips easily onto clothes.
- Sends Bluetooth phone conversations directly to your patients' hearing instruments.
- Offers both easy-to-use basic phone operation and state-of-the-art headset functionality.
- Doubles as a basic hearing instrument remote control.
- Onboard hearing instrument mute functionality.
- Advanced Audio Distribution Profile (A2DP) streams quality stereo sound.
- 6 hours talk time, 80 hours standby time.

Note:
Fully compatible with ReSound Verso™.
When used with wireless ReSound Alera® hearing instruments with serial number lower than 128655398, the hearing instruments must be initially paired with a ReSound Unite® Remote Control (either a customer or dispenser remote control) to enable the remote control functionality in the Phone Clip+. Mute and stereo streaming is unavailable on all Alera hearing instruments.

ReSound Control™:

- The ReSound Control™ app is the first fully integrated, functional mobile app for hearing aids and wireless streamers.
- Users get advanced remote control functionality in a device that many already carry with them.
- App provides large visual overview of current volume and program settings.
- User can adjust volume on hearing instrument microphones, audio streamers (ReSound TV Streamer 2 and Mini Microphone) as well as phone conversations.
- User can choose desired program directly without toggling.
- ReSound Phone Clip+ is required to operate ReSound Control.
- App is available for: iPhone 5, iPhone 4S, iPhone 4 and iPhone 3GS running iOS 5 or later, and Android™ smartphones running version 2.3 or later.

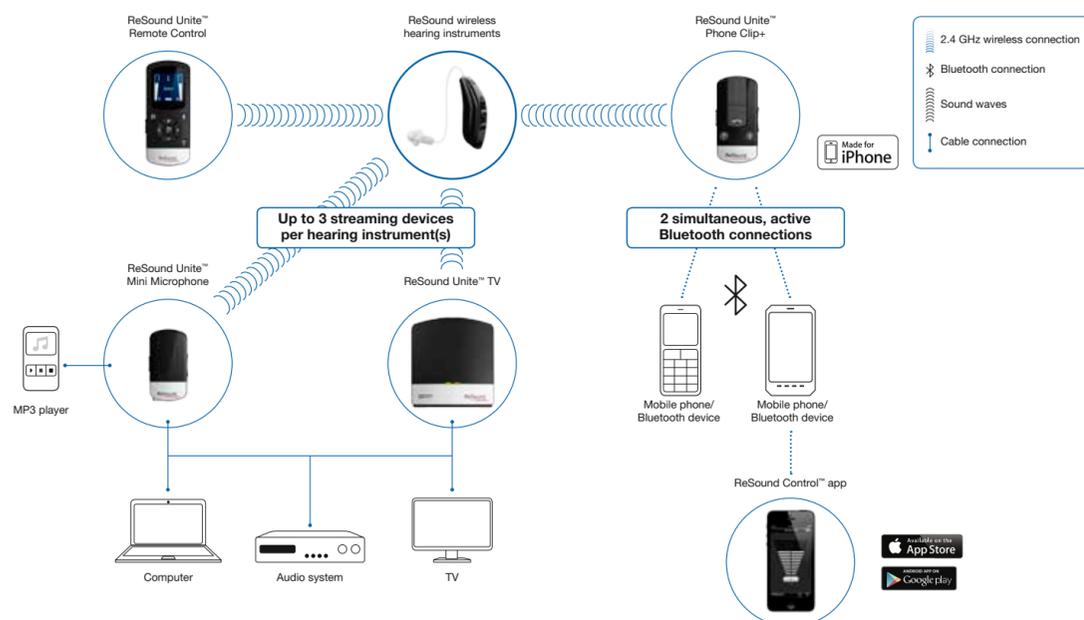

ReSound Unite™ TV Streamer 2:

- The patients don't have to wear anything but the hearing instruments.
- Transforms ReSound wireless hearing instruments into smart and discreet wireless headphones.
- Sends stereo sound from the TV or other audio sources directly to the hearing instruments.
- Streams crystal clear sound within a range of up to 23 feet, so patients can move around while watching TV.
- Reconnects automatically if the patients go out of range and return within 5 minutes.
- With an unnoticeable 20ms delay, synchronization issues between sound and image are avoided.

ReSound Unite™ Remote Control 2:

- Easy LCD display overview of hearing instrument settings.
- Can be used to change programs, initiate streaming from the TV Streamer 2 or Mini Microphone, and adjust volume balance of hearing aids microphones and streamer.
- Can block out surrounding sounds completely with mute button.
- Rechargeable with low battery indicator.
